

Faye Deane is a visionary chiropractor, public health advocate, and academic leader committed to strengthening musculoskeletal health systems and advancing professional integration. Currently pursuing a PhD in Public Health at Teesside University, her research focuses on enhancing musculoskeletal healthcare systems in the UK within the framework of Integrated Care Boards. Passionate about professional integration across education, clinical practice and research, Faye plays a pivotal role in policy and public health advocacy as a Board Member of the British Chiropractic Association.

As the Course Leader of Teesside's MSci Chiropractic degree, Faye implemented the UK's first formalised chiropractic placement model in collaboration with four NHS Foundation Trusts and co-authored the national Chiropractic Placement Educator Standards. She also spearheaded the development of a cutting-edge public health curriculum, aligning with WHO strategies, her work on the WFC Public Health Committee, and the evolving field of functional medicine.

Recognising the power of collaboration, Faye has created immersive, intercultural global health research opportunities for students, widening participation at a grassroots level. She also leads global and national interprofessional education conferences, fostering multidisciplinary collaboration that bridges disciplines, institutions, and geographies.

A Fellow of the Royal College of Chiropractors and the Royal Society of Public Health, Faye has forged international partnerships with institutions across South America and Southeast Asia, shaping the future of chiropractic and public health on a global scale. A seasoned presenter, published author, and award-winning leader, she continues to drive innovation in education, policy, and patient-centred care.
